

ASSIST 2K

A Comprehensive Inventory, Manufacturing, and Integrated Accounting Solution

ASSIST 2K includes everything you would expect from a comprehensive accounting and operations software package. Some of the great features in **ASSIST 2K** include:

- **Document / Image Archiving:** Link JPG, PDF, Word, Excel files and web links to records within ASSIST. Use it to store pictures of your items, certificate of conformance documents, testing documents or signed delivery documents. These can then be called up within your browser.
- **Windowing Capability:** "Command" feature allows you to interrupt whatever you are doing and open a temporary window to check stock, run a report, enter an order, or do virtually anything you need to do. Hot keys allow you to jump right to the Item and Customer researches.
- **Job Streaming:** You can set up a series of reports and updates to automatically run unattended. Save the report definitions and have the reports waiting for you when you come in.
- **Unlimited Remarks Text:** Virtually unlimited free-form public and private text space on master files, and transaction header and lines files.
- **Data Exporting:** You can move data into a Windows application like Microsoft Excel or other ODBC / SQL compliant applications.
- **System Alerts:** Ultra-backoffice communications. This will allow you to notify users when certain inter-application events occur. Such as if a sales order does not ship then notify the salesperson, changing the production order will notify the purchasing agent and so forth.

Application Features:

- **EDI:** Send and receive documents electronically (with 3rd party EDI software).
- **Kitting:** Automatically handles kit components when you enter the kit line item on a sales order.
- **Bill Of Materials:** Multi-level bill of materials with imbedded QA instructions and standard cost roll-up.
- **Manufacturing:** Production orders, inventory allocation, traveler / work order forms, back flush inventory, job progress and labor tracking.
- **Automated Confirmation of Shipments:** Let your 3rd party shipping manifest system automatically enter freight charges and confirm shipped-as-is sales orders. Eliminates unnecessary front office data entry.
- **Desktop E-mail / Faxing of Documents:** Working with 3rd party faxing software, you can fax or e-mail forms directly from your computer.
- **Vendor-managed Inventory:** In conjunction with EDI, track and control your inventory on your customers' shelves.
- **Lot Control:** Track and trace inventory quantities by lot or multiple bin locations.
- **Item Cross-referencing:** Set up customer item codes, alternates, substitutes, recommendations, and MSDS links.
- **Bar-code Integration:** Use bar-code technology to simplify physical inventory, departmental order tracking, shipping and receiving.
- **Integrated sourcing:** track your vendors' quotes to you, and easily convert them to purchase orders.
- **Purchase processing:** manage your outside processing transactions through the Purchasing system.
- **Purchase order automation:** automatically create purchase orders from your stock replenishment report.

Rennie, Lindsey and Associates, Inc.

When you work with *E-Syst* or *ASSIST 2K*, you are really beginning a fruitful relationship with **Rennie, Lindsey and Associates**, so you should know something about us.
